CHAPTER 01

Executive Summary

What we are building, who it is for, and why it pays for itself.

Toone Construction Co. is a 35-year-old Utah commercial and civil general contractor specializing in tilt-up commercial buildings, public works, tenant improvement, and site work, founded in 1990. Toone does excellent work; it is time the digital presence reflects it.

This proposal lays out a coordinated plan for a refreshed brand, a new website, and a 90-day rollout to make the company easier to find, easier to vet, and easier to hire than any regional commercial-and-civil GC in its category.

What you get

- **One coordinated brand system** covering the company — distinct identities that still read as a family.
- **One production website:** a new tooneconstruction.com with depth on services, service areas, and project showcase.
- **Local SEO + Google Business Profile (GBP) overhaul** to reposition the brand in the highest-leverage channel for this category.
- **Social media content engine:** LinkedIn-focused and sustainable post-launch.
- **90-day fixed-price build**, with options for ongoing support and maintenance.

Why Act Now

Construction investment is at a decade high, putting a spotlight on exactly the specialized work Toone delivers. Now is the time to turn that market momentum into wins. A polished, modern digital presence positions Toone as the clear, credible choice for owners, GCs, and engineers, elevates you in search results, and helps you recruit the field and office talent needed to scale. Just one additional mid-size commercial tilt-up or public-works award can range from \$1M–\$15M+; if improved visibility and trust help Toone win even one new bid per year, this investment can pay back 20×–200×.

CHAPTER 02

The Opportunity

Where Toone stands against Utah-market peers.

Before designing anything, we conducted market research. Two takeaways drive this proposal: **(1) LinkedIn is where Utah commercial and civil B2B happens**, and **(2) Google Business Profile is critical to building local awareness of your business**. Both are areas of opportunity for Toone.

LinkedIn Competitive Landscape

LinkedIn is where commercial GCs, owners’ reps, developers, and project managers vet contractors before short-listing. Toone can become a player within this space within 12 months.

Company	LinkedIn	Founded	Notes
Big-D Construction	~19k	1967	Commercial + civil GC
Layton Construction	~14.5k	1953	Commercial GC
Okland Construction	~8,200	1918	Commercial GC
Jacobsen Construction	~6,800	1922	Commercial GC
R&O Construction	~4,100	1980	Commercial GC
Hogan & Associates	~2,300	1990	Commercial GC
Westland Construction	~1,300	1996	Commercial GC
Toone Construction Co.	412	1990	Commercial + Civil GC

LinkedIn followings as of May 2026, rounded. Sources: company LinkedIn pages, agc-utah.org member directory.

Why this gap matters

- LinkedIn is where **80% of B2B social leads** come from, and it converts about **4×** better than Facebook or X for commercial work.
- **89% of B2B marketers** use LinkedIn for lead generation, and **40%** rate as their most effective channel.

Google Business Profile: Maximize SEO

Google Maps is where most buyers build their short list. When someone searches for any of your services (commercial GC, tilt-up, site work, public works), Google shows three local businesses at the top of the page, with star ratings, reviews, photos, and a tap-to-call button. That box appears before any regular search results. Miss that spot and Toone is invisible at the moment a buyer is ready to act. A strong Google Business Profile and an active review program help build instant trust, drive inbound calls, and route qualified traffic to the new website.

Benchmark	Where you want to be	Average company	Where you are today
Google review count	100+	20–80	9
Star rating (jobsite category)	4.5–4.7	4.0–4.4	4.6
GBP photos (recent, geo-tagged)	40+	10–20	3
Owner replies to reviews	100%	~50%	0%
Service area pages (linked from GBP)	8–12	3–6	0

Each additional Google review correlates with **+80 website visits, +63 direction requests, and +16 calls** per year for the average local business (BrightLocal, 2025). For a contractor whose average ticket is six figures, the unit economics are obvious.

CHAPTER 03

Brand & Web Strategy

One brand, one site, one operating system.

Toone Construction serves two related but distinct buyer audiences — commercial and civil. The brand reads as one capable firm; each division gets its own dedicated section on the site so buyers find exactly the work they need.

Brand refresh — single coordinated identity

Toone Construction has equity in the local market — 35 years and a steady book of public-works and commercial buildings, site work, and utilities. The current wordmark is serviceable but reads dated. The refresh sharpens the typography, modernizes the palette, and tightens the visual system while keeping the equity already built.

- **Logo:** refreshed wordmark with a horizontal lockup for web/social and a stacked variant for forms and signage.
- **Tagline:** "Commercial and civil. Built on the work."
- **Palette:** deep-steel blue and construction orange as the core colors, with neutral grays for body and a warm off-white for text-heavy sections.
- **Typography:** bold, condensed headlines paired with clean, readable body text. Industrial without feeling generic.
- **Photography system:** on-site photos and video from active commercial and civil jobs, refreshed quarterly.

Web build — the site

The site uses modern technology so it loads fast, updates easily, and ranks well — and is built around how Toone's buyers actually shop: by service and by service area. Each site is built for the company's needs.

Built to save time and bring in leads

- **Update without a developer.** Add a new project, post a blog, or change a service description in minutes. The site stays current without becoming a chore for your team.
- **Built for the phone.** Most customers, GCs, and crew look at the site from the jobsite or the truck, not a desktop. Pages load fast and read cleanly on mobile, where the decision to call actually happens.
- **Found by Google.** Every page is structured so search engines recognize Toone, its services, and its projects, putting it in front of buyers searching for commercial or civil construction work right now.

Page set

tooneconstruction.com

- Home — hero, capability snapshot, latest projects, lead form
- Commercial Construction — services overview + sub-pages (tilt-up, public works, TI, healthcare, education)
- Civil Construction — services overview + sub-pages (site prep, utilities, roadwork, storm)
- Projects — filterable case-study gallery
- Service Areas — geo-targeted landing pages for each Wasatch Front city
- About — history (est. 1990), leadership, safety record, certifications
- Careers — open roles, culture, application form
- Contact / Get a Quote — RFQ form, direct dispatch line, jobsite address request

CHAPTER 04

SEO & Local Search

The highest-leverage channel for the brand.

For a commercial and civil GC, the search journey is local-first: a developer, school district, or municipal project manager types a need into Google, sees a map of local providers, and calls one of the top three. The website matters — but only after they have found you on Google Maps.

Google Business Profile (GBP)

- Claim and verify the Toone Construction GBP (partially claimed; needs primary category set and photos added).
- Categorize primary and secondary services (General Contractor, Commercial Building Contractor, Construction Company, Civil Engineer, Excavating Contractor).
- List and claim all the service areas where you do business.
- Ensure hours, contacts, attributes, accessibility, payment methods, and languages are consistent across all listings.
- Add 30+ recent geo-tagged jobsite photos in batch, then continue adding 4–6 per month consistently.
- Create a review program with a text template to send to clients after every completed job, with a direct GBP link.
- Set up a process so you can respond to all reviews quickly, positive or negative.

Technical SEO foundation

- Add structured data tags to every relevant page (business, services, projects, FAQs) so search engines can read your site cleanly.
- Tune every page for fast load times.
- Create smart internal linking so service pages connect to relevant project case studies, helping visitors and search engines find the right work.
- Connect your sitemaps to the major search engines (Google, Bing) so pages get indexed quickly.
- Ensure your business information is consistent across 30+ directories (BBB, AGC of Utah, Yelp, BuildZoom, Procore, and others).

Target keywords

Toone Construction — Utah commercial + civil GC

- commercial general contractor utah
- tilt-up construction salt lake city
- school construction utah
- public works contractor wasatch front
- tenant improvement contractor salt lake
- civil contractor utah county
- site preparation utah
- underground utilities salt lake

CHAPTER 05

Social & Content

Where the competition already lives, and where Toone can catch up fastest.

LinkedIn — the priority channel

- We will refresh the Toone Construction LinkedIn page (banner, about copy, and post cadence) and bring the Toone Construction LinkedIn page in line with peers (Big-D, Layton, Okland, Hogan).
- Posting cadence: **3 posts/week** mixing project milestones, behind-the-scenes shop/yard content, hiring posts, and short ownership notes.
- Employee advocacy: foremen, PMs, and ownership reshare from personal accounts to boost social engagement and amplify reach.
- Each month, send 50–100 personalized connection requests on LinkedIn to potential clients.

Content pillars

Toone Construction

- Jobsite milestones (slab pours, structural milestones, ribbon-cuttings)
- Action photo and video — equipment in motion, crews on site, drone progression
- Project case studies (public works, commercial, civil — one per month)
- Crew spotlights and safety wins
- Behind-the-scenes from estimating, pre-con, and the field office
- Industry commentary from leadership (market conditions, AGC engagement, public works trends)
- Hype reel — a 60-second highlight video per quarter for LinkedIn + the website hero

Instagram + Facebook

- **Instagram** is where the visual story lives. Jobsite photos and short videos put Toone in front of GCs, project managers, field workers, and recruits who respond to seeing the work, not just reading about it.
- **Facebook** reaches Utah professionals, local community pages, and crew families who share what they see. Everything cross-posts from Instagram automatically, so you cover both audiences with one effort.
- **Reels (short videos)**: one per brand each month showing a time-lapse project, a build progression, or equipment in action. Cheap to produce, and the single biggest credibility and recruiting lift available on social media.
- **Tag every post with the jobsite city and "Utah"** so people in your service area discover you when they search nearby. This is free visibility that compounds month over month.

Content

- **We provide professional photography and videography.** Drone, jobsite, and shop coverage captured during 4 day shoots that will produce 8–10 weeks of posts across the brand.
- **We train your team so they know how to capture content easily.** Someone in your office can then take those photos and video clips and post them manually to your social media platforms.

CHAPTER 06

The Marketing Operating System

A marketing system you can manage, not an agency you rent.

Most marketing engagements end one of two ways. The agency keeps billing forever, or the client tries to take it in-house and the work quietly stops. Neither outcome is good for Toone. This chapter describes the third option.

The Marketing Operating System is a custom-built system that automates roughly 80% of the ongoing marketing work: social posts, review replies, SEO content, and lead triage. A human (you) approves every item before it publishes. We build it, train it on your brand voice, and hand it over. After 90 days you have a working system, not an agency dependency.

Why this is possible now

- Modern AI tools are good enough to draft brand-voice content from a two-sentence note and three photos sent by a foreman from a jobsite.
- Today's workflow tools can route those drafts into approval queues, post on schedule, and track performance without custom engineering.
- Google, Meta, and LinkedIn now offer stable connections so we can publish to them reliably, without workarounds.
- The result: **MARKETING WORK** that used to require a part-time hire can run on a 15-minute-a-day approval routine for an office manager.

Your five AI agents

Five specialized AI agents handle distinct jobs. Each one drafts. A human approves. Nothing publishes without a click.

Field-to-Content Agent

A foreman or PM sends photos and a short note via text message ("Finished the Lehi sewer tie-in, biggest job of the year, 14 hours"). The agent generates a LinkedIn post, Google Business Profile post, Instagram caption, blog snippet, and internal newsletter blurb, all in Toone voice. Office manager taps approve.

Reputation Agent

This agent watches your Google and Facebook reviews on the brand. When a new review comes in, it drafts a reply in your brand voice and adjusts the tone to match the rating. A 5-star review gets a friendly thank-you. A 1- or 2-star review gets a measured response with a private offer to resolve the issue. The office manager approves and the reply posts.

SEO Content Agent

Each month, this agent looks at how your search rankings are changing, finds one or two pages or blog posts that would help you compete better in your service areas, drafts the full content, and sends it to you for approval. Over 12 months, this closes the search gap between you and your competitors without hiring a copywriter.

Lead Triage Agent

This agent classifies inbound inquiries into RFP, RFQ, design-build inquiry, spam, and general categories. It extracts contact info and potential project info, then drafts an internal message alert and a 3-line auto-reply. Hot leads are routed directly to you in under a minute.

Orchestrator + Approval Queue

A central scheduler routes events to the right agent and lands all drafts in a single approval queue: one screen, one inbox, every brand. Approved items publish on the right schedule. Rejected items improve the prompts inside each agent.

What this replaces

A marketing coordinator at \$50,000 to \$70,000 per year or an agency retainer for thousands of dollars per month. The Marketing Operating System does the same job with a 15-minute approval routine and roughly \$200 per month in infrastructure.

System architecture

The pipeline is intentionally simple. Each box is replaceable; nothing is locked in.

Built on modern technology with direct connections to LinkedIn, Google Business Profile, and Meta.

Three-phase ownership transfer

You do not buy this and figure it out. We run it with you, then alongside you, then behind you. By month 7 your office manager is running the system in 15 minutes a day and we are on a maintenance retainer.

Phase 1	Concierge	MONTHS 1–3	• We run the system day-to-day while training it on your voice • 90 days of approved content captured to teach the system how you sound • Office manager observes while we document everything on how to run the system
Phase 2	Co-pilot	MONTHS 4–6	• Office manager runs the approval queue while we maintain the system • Weekly check-ins while we handle voice tuning and integrations • Performance review at month 6 to right-size phase 3

- Phase 3

Self-serve

MONTH 7+

- You run it. We are on retainer for system maintenance only
 - Quarterly strategy review and updates as Google and AI tools change
 - Cancel anytime. The system keeps running either way

REALISTIC 12-MONTH TARGETS			
With and without the Marketing Operating System			
TOONE CONSTRUCTION			
PLATFORM	W/O	W/MOS	LIFT
LINKEDIN	750	1,400	1.87x
INSTAGRAM	420	650	1.55x
FACEBOOK	310	475	1.53x
GBP REVIEWS	20	60	3.00x
AVERAGE LIFT WITH MARKETING OS			
1.8x more followers across the brand			

CHAPTER 07

Investment & Timeline

Fixed-price build, three-tier ongoing model.

Build phase: fixed price

Brand refresh	Logo refresh, palette, typography, usage guide, and brand voice document.	\$7,500
Website: tooneconstruction.com	Deep single-brand site: home, commercial division, civil division, projects, service-area pages, about, careers, contact.	\$22,500
SEO foundation	Google Business Profile setup, structured data, business listings, technical audit, on-page work.	\$5,000
Content shoot + initial library	3-day photo and video shoot at active jobsites, plus a 90-day post library.	\$7,500
Hype video + content engine	Two 60-second hype videos edited from shoot footage, plus the editorial calendar and brand-voice training that feed the Marketing Operating System.	\$5,000
Build phase total	One-time. Static buildout: brand, website, SEO foundation, and content library.	\$47,500

Marketing Operating System

A separate, one-time build that delivers the agents, approval queue, and integrations. Operated under a monthly retainer (three tiers below) that covers ongoing support and maintenance.

Marketing Operating System build	Five agents, central scheduler, approval queue, brand-voice training, and integrations. Full support for the Marketing Operating System and a monthly report.	\$17,700
Combined build total	Build phase (\$47,500) plus Marketing Operating System build (\$17,700). 40% on signature, 30% at design approval, 30% at launch.	\$65,200

Engagement at a glance

The full arc on one axis: a 90-day build, then a phased retainer that steps down as your team takes the wheel.

WEEKS 1–12	MONTHS 1–3 POST-LAUNCH	MONTHS 4–6	MONTHS 7+
BUILD	CONCIERGE	CO-PILOT	SELF-SERVE
\$65,200 one-time	Included in build	\$850 / mo infra included	≤ \$350 / mo + ~\$200 infra

Build is one-time. Retainer phases begin at launch (weeks 10–12) and can step down a tier with 30 days' notice after month 3.

Marketing Operating System retainer: three tiers

Pick the tier that matches how hands-on you want to be. The descriptions below detail what each phase covers.

Concierge: we run it	First 3 months after launch. Default tier. Included in the Marketing Operating System build above. We operate the system and you receive a monthly report.	No fee infrastructure included
Co-pilot: you run it, we maintain	Months 4–6 post-launch. Recommended next step. Office manager runs the queue while we tune the system.	\$850 / mo infrastructure included
Self-serve: system maintenance	Month 7+ post-launch. Quarterly strategy review, voice updates, and integration patches. Infrastructure (AI, hosting, scheduler, email) passes through at cost — billed through us at zero markup, or moved to your own accounts.	up to \$350 / mo or \$150/hour, whichever is less + ~\$200/mo infrastructure

Timeline: 90 days to launch

01	Discovery + Brand	WEEKS 1–3	• Stakeholder interviews; site audit • Toone Construction brand refresh • Photography and videography for 4 days at active jobsites + shop • Google Business Profile setup and business listing pass • You approve the brand work before we start the website
02	Design + Build	WEEKS 4–9	• The site designed and built for each company's needs • Content drafted with leadership input • You approve the design and content before we launch
03	Launch + Activate	WEEKS 10–12	• Soft launch → final QA → hard launch • LinkedIn relaunch with refreshed pages and content • Review ask program activated for the brand • Marketing Operating System goes live. Concierge phase begins (included in build).

What you own at the end

You own all your data, content, brand identity, and historical drafts. To keep operating the Marketing Operating System, you can stay on the \$350/mo Self-serve retainer or pay \$150/hour for support, whichever is less. Move on whenever you want, and your data, content, and brand work come with you.

CHAPTER 08

Next Steps

What we need to start, and when we can start.

Approvals required

- Sign-off on this proposal (this PDF and a brief Master Service Agreement).
- Final brand direction sign-off (palette, typography, photography style). and what the website concept reflects today.
- Designated point of contact at each company for weekly check-ins.

What we need from you

- Google Business Profile and social account access (or the green light to claim/create).
- Domain access for both tooneconstruction.com and .
- Two to three upcoming jobsites we can shoot in weeks 2–3.
- A list of 3–5 case-study-worthy projects from the last 5 years.

Kickoff

On signature we hold a 60-minute kickoff with leadership from the company, agree on the first jobsite shoot date, and start the brand work the same week. The 90-day clock starts on signature.

A note on the work

Toone has built something real over three decades. This engagement is a chance to something new on top of that foundation. The deliverables in this proposal exist to serve that, not the other way around. If anything in here does not fit how you want to be in the world, tell us and we will adjust before we start. We work for you.
